DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, 14-17, 19, 21-24, 30, 32, 33, and 40-43, drawn to method of nucleic acid hybridization, classified in class 435, subclass 6.
 - II. Claims 13, drawn to nucleic acid, classified in class 536, subclass 22.1.
 - III. Claims 18, 20, 25-29, 31, 34-39, and 44-46, drawn to hybridization reaction mixture comprising a ligand, classified in class 424 , subclass 35 .

2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II-III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, nucleic acid of Group II and hybridization reaction mixture comprising a ligand of Group III can be used in the method of nucleic acid hybridization of Group I or can be used in the production of RNA or protein or can be used to make antisense nucleic acid for gene therapy.

3. Inventions of Groups II and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed

Art Unit: 1634

does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because nucleic acid probe of Group II does not require another ligand such as actinomycin D or distamycin A to function as a hybridization probe. The subcombination has separate utility such as treating a bacterial infection as it contains an antibiotic ligand.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Nicholas Triano, III on November 13, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
